

November 15-16, 2023

PV Days 2023

Paving the Way to a Sustainable
Comeback of the German PV Industry

PROGRAM FOCUS

How will the much described comeback of the German PV industry further develop? Following on from last year's thematic focus, we would also like to discuss how the industry's recovery can actually succeed in the long term and what significance the topic of quality assurance has in this context.

This year's PV Days workshop program will therefore focus on the following topics:

- Material and Process Variations
- Quality Risks in Cell Purchasing and Incoming Goods Inspection
- Quality Assessment of Modules and Components
- PV System Assessment
